

Bulldog Tough
Faster Start
Heat Tolerant

Elite Fescue/Sports Rye

Germination 7-10 Days Seeding Rate 5-10 lbs
Low maintenance at the top of your priority list? You should choose **Macho Mix™**, elite fescue/sports turf rye grass seed mix, specially selected for Kansas City. Varieties are chosen for color, wear, heat, and drought tolerance. Very good shade tolerance as well as an excellent full sun performer. **Macho Mix™** contains 5% perennial sports turf rye. Sports turf rye has the ability to hold the fescue up in heavy traffic areas. Great for play zones and dog runs. The quick germination from perennial sports rye makes **Macho Mix™** a valuable tool when a fast start is needed for slopes.

Prettiest Lawn
Wear Tolerant
Lawn Renovator

Elite Bluegrass/Sports Rye

Germination 7-10 Days Seeding Rate 5-10 lbs
Want the soft friendly feel and lush thick look to your turf? You should choose **Estate Mix™**, bluegrass and perennial sports turf rye mix, is an excellent choice for fall lawn renovating and spring seeding. Give your lawn that soft well manicured look of a golf course fairway. Aggressive bluegrass varieties will fill in routine damage and perennial sports turf rye adds durability in heavy traffic areas. Good for shade areas and excellent in full sun.

Red Zone Tough
Dog Run Reviver
Tolerate Poor Soil

Sport Turf Perennial Rye

Germination 7-10 Days Seeding Rate 5-10 lbs
If homeowners want to increase wear tolerance and playability without sacrificing good looks, a fine leaved turf rye blend such as **Stadium Special™** can be mixed with bluegrass or fescue lawn. These varieties are used on golf courses and sports fields throughout the country for their durability and good looks.

SPOT SEEDING
and PREVENT! 
RECIPE FOR SEED SANDWICH

INGREDIENTS:

- PREVENT!** @ WEED GRASS PREVENTER AND TURF FOOD
- PRIMERA FC SEED DRESSING**
- GRASS SEED**
- GARDEN RAKE**
- LAWN SPRINKLER**

DIRECTIONS:

1. Apply **PREVENT!** as directed, watering with 1/2" water to activate.
2. After watering wait 48 hrs, use rake to scratch the soil surface in bare spots. This breaks down the **PREVENT!** vapor barrier, reducing effectiveness.
3. Apply generous layer of **Primera FC** grass seed dressing. Covering entire bare spot area up to 1/2" deep.
4. Apply grass seed at bare ground rate over top of grass seed dressing.
5. Apply **Primera FC** dressing covering seed up to 1/4" deep.
6. Water seeded areas regularly keeping seed consistently moist.

GRASS PAD
"High on Grass for Over 50 years!"

DORMANT SEEDING or SPRING RENOVATION

Mow the lawn short (1½-2") and rake or sweep the lawn to remove heavy clippings or other debris. Rough the surface of soil giving special attention to bare spots.

Apply **GOLF COURSE STARTER** fertilizer at 8 lbs. per 1000 sq ft or for large lawns use **RENOVATOR** at 4 lbs. per 1000 sq ft rate.

Spread the grass seed with a rotary or a hand cranked "whirlwind" spreader. Special attention should be given to spots where the ground is bare. Extra seed should be applied by hand to these spots.

On bare spots apply a light mulch of **Primera FC** seed dressing or sphagnum peat moss.

Top soil & composted peats contain weed seeds and **SHOULD NOT BE USED!**

Weather permitting, water the seedbed lightly so the soil surface is moist. In early spring continue watering regularly so the soil does not become hard or baked.

Mid April: Apply Tupersan® or Siduron based crabgrass pre-emergent safe for new seeding. Allows grass seed to grow and keeps weed seeds out.

Continue mowing at a height of 2½" to 3" with a sharp mower blade, at a time when the grass is not wet. In the heat of summer mow to a height of 3" to 3½".

Broadleaf Weeds may be controlled after the bare spots have filled in and you have mowed your lawn at least twice. Use **Loveland Weed & Feed™** granular or spot spray with liquid **Trimec®** or **Speedzone®**.

Early June: Apply full strength **PREVENT!®** crabgrass control to all areas that have been mowed at least twice.
