

Tips for Fall Seeding

- Mow the lawn to a height of 1 ½ - 2 inches. Bagging will help to remove excessive clippings.
- Rake to remove heavy debris. Roughing the surface of the soil and giving special attention to bare spots. For larger areas, verticutting will greatly improve your seed to soil contact, but not required for good fall seed germination. Soil should be moist, not wet, when verticutting.
- Apply **Loveland Golf Course Starter** fertilizer at 6-10 lbs. per 1,000 sq. ft. for large lawns use **Loveland Renovator** at 3-5 lbs. per 1,000 sq. ft.
- Spread your premium Grass Pad seed with a rotary or a hand cranked spreader. Extra seed should be applied to bare spots.
- Cover bare spots with a light mulch of sphagnum peat or **Primera FC** seed dressing. Top soil & black peats contain weed seeds and should not be used.
- Water the seedbed lightly so the soil surface is moist. Continue watering lightly so the soil does not become hard or baked.
- When the seedlings reach a height of 2-3 inches, mow to a height of 3 inches with a sharp mower at a time when the grass is not wet.
- Apply booster shot application of **Loveland Golf Course Starter** or **Renovator** after 4 weeks.
- To promote deep roots apply **Loveland Snowman** to seeded area in late fall (Oct-Nov)

**Bulldog Tough
Faster Start
Heat Tolerant**

Elite Fescue/Sports Rye

Germination 7-10 Days

Seeding Rate 5-12 lbs

Low maintenance at the top of your priority list? You should choose **Macho Mix™**, elite fescue/sports turf rye grass seed mix, specially selected for Omaha. Varieties are chosen for color, wear, heat, and drought tolerance. Very good shade tolerance as well as an excellent full sun performer. **Macho Mix™** contains 5% perennial sports turf rye. Sports turf rye has the ability to hold the fescue up in heavy traffic areas. Great for play zones and dog runs. The quick germination from perennial sports rye makes **Macho Mix™** a valuable tool when a fast start is needed for slopes.

**Prettiest Lawn
Wear Tolerant
Lawn Renovator**

Blue Wave/Sports Rye

Germination 7-10 Days

Seeding Rate 4-10 lbs

Want the soft friendly feel and lush thick look to your turf? You should choose **Estate Mix™**, a combination of **Blue Wave** bluegrass and **Stadium Special** perennial sports turf rye mix, is an excellent choice for fall lawn renovating and spring seeding. Give your lawn that soft well manicured look of a golf course fairway. Aggressive **Blue Wave** bluegrass varieties will fill in routine damage and **Stadium Special** perennial sports turf rye adds durability in heavy traffic areas. Good for shade areas and excellent in full sun.

**Red Zone Tough
Dog Run Reviver
Tolerate Poor Soil**

Sport Turf Perennial Rye

Germination 7-10 Days

Seeding Rate 5-12 lbs

If homeowners want to increase wear tolerance and playability without sacrificing good looks, a fine leafed turf rye blend such as **Stadium Special™** can be mixed with bluegrass or fescue lawn. These varieties are used on golf courses and sports fields throughout the country for their durability and good looks.

Grows in a Cave

Germination 7-10 days

Seeding Rate 5-12 lbs

When the heat of summer sets in and we go out to set under the old oak tree for a nice cool evening in the shade it is always frustrating to find the once lush green grass to be brown or completely gone.

What happens is the tree will out compete the turf for resources necessary for life. To compensate for this unfair advantage the tree holds over the turf we try to level the playing field with **Uncle's Premium Shade Mix** that contains grasses with lower water and nutrient requirements. Bluegrass and fine fescues are improved hybrids that handle these conditions very well.

**Beats the Heat
Deep Roots
Shade Tolerant**

Elite Fescue Blend

Germination 10-14 days

Seeding Rate 5-12 lbs

Elite fescue blend specifically for Omaha. Dark green color with exceptional root strength for durability and drought tolerance. Genetic diversity for improved diseases resistance.

Fescue/Bluegrass Mix

Germination 10-14 days

Seeding Rate 5-12 lbs

Durability and drought tolerance of fescue with the rhizomatous healing ability of bluegrass.

**Deep Green
Aggressive
Self Repairing
Traffic Tolerant**

Elite Bluegrass Blend

Germination 14-21 days

Seeding Rate 2-6 lbs

Elite bluegrass blend makes the most desirable lawn with the least effort of any turf grass. Blue Wave bluegrass has runners that allow it to spread, fill in bare spots, and repair itself from damage. This turf quality makes it more wear tolerant than fescues or buffalo grasses and ideal for safe playing surfaces on sports fields or front lawns.

READ THE LABEL

When choosing a grass seed mix, read the label carefully. Avoid mixes that contain coarse bladed varieties such as K-31 pasture fescue and other coarse fescue types. In our area, K-31 is a special problem, it is a coarse bladed grass best suited for pasture and landfills. **K-31 is not recommended as a lawn turf grass.**
